begin to create and edit photographs. In fact, Photoshop doesn't even require you to have an Internet connection to download photos that you upload to the program. Whatever program you decide to learn with, be sure you have a reliable Internet connection, so you can download all the programs' updates as they become available.

Chapter 2 highlights all the software programs that you can use with this book. The following section describes Photoshop's tools and features, how to load photographs and arrange them, and how to edit photos from a variety of angles. ## Exploring Photoshop Photoshop has many tools and toolsets that enable you to alter images with ease. It offers full support for all the document formats common in the graphic design and image editing industry, such as

---

JPEG, GIF, and TIFF images as well as layered Photoshop files. When you open a file using Photoshop, you see the Organizer on the left and the Preview area on the right (see Figure 1-1). In the Preview area, you have a variety of tools to work with different components of an image. Some tools are well suited to any task you might want to complete. For example, you can apply almost any filter to any document. The Organizer, or workspace, is where you compose and arrange various aspects of your document. The tools in the preview window are there to edit the image. You use a combination of tools to change and manipulate a photo in almost any way you want. You can produce amazing results by combining multiple photographs, filters, and artistic techniques. Although this book

---

contains many exercises for creating photomontage images, you don't need to create montages to create amazing images in Photoshop. Chapter 2 has a lot of tutorials for making your own multiple-layered images. The program offers a depth of editing that only a trained professional can attain. You can change colors on an image. You can flip and distort an image, to create new and unique images. After you've put your finishing touches on an image

Photoshop for graphic designers. Photoshop is highly regarded as the industry standard for designing. This is the case for many reasons, but the most obvious one is that Photoshop can create almost any kind of

Thus it's a poor option if you're working with large numbers of designs. Creating beautiful images can be done with Photoshop without using it for full-blown web design. It can be an excellent option for any kind of image editing, and it's perfectly suited to hobbyists as well as photographers

Q: How to configure software RAID1 on Ubuntu 13.04 I had install Ubuntu 13.04 and configured software raid from the installation as per the guide: After installation, when I boot it, the grub couldn't auto locate the installed ubuntu. If I have to manually select the installation, the boot process is stuck at the purple splash screen. The harddisk attached is a SATA disk and I guess it needs 'ata' configuraton. Is it ok to edit the grub to add 'ata' configuration? A: The newer versions of Ubuntu do not use the "traditional" software raid to install the system. Instead the installer uses "fake" raid with 1 disk mounted as a single logical volume. To set up a RAID 1 system, open a

terminal and run: # mdadm --create  
/dev/md0 --level=1 --raid-devices=2  
/dev/sda1 /dev/sdb1 # mkfs.ext2 /dev/md0 #  
mount /dev/md0 /mnt I presume your  
harddrive has a single file system. Do not  
destroy or partition /dev/md0! Then, edit  
/etc/fstab to mount the raid after boot:  
UUID=XXXXXXXXXXXX /mnt ext2 defaults  
0 2 where XXXXXXXX is the UUID of the  
md device. If you need swap and storage  
partitions for the system, put them there:  
UUID=XXX-XXX-XXX-XXX-XXX /  
swap swap defaults 0 2 UUID=XXX-XXX-  
XXX-XXX-XXX /mnt/storage ext4 defaults  
0 2 (where XXXX-XXX-XXX-XXX-XXX  
is the UUID of md0 and UUID of the swap  
device, that is, the swap partition U

Q: How to create a function that allows me to choose from an array of objects, then use that object's properties to choose from a second array, to then create an object So, I have two arrays, PlayerName and MoveName  
PlayerName = ["...", "...", "...", ...]  
MoveName = ["...", "...", "..."] ...is equal to 1,2,3,4 etc. How do I create a function that allows me to choose from either array to then create an object of which properties are equal to the size of the chosen array? So for example, let's say I choose to work with an object that looks like this: { PlayerName: "...", MoveName: "...", Score: 0 } ...Then I would want to create a function to use those properties to show on screen in order for me to create an object. Let's just say that the function is like this: function

---

```
showScore(MoveName,PlayerName){  
//Console.log(MoveName+PlayerName); }  
...How would I go about this? A: That  
should work: function showScore(player,  
move) { let newObject = { PlayerName:  
player, MoveName: move }; return  
newObject; } var player1 =  
showScore(["...", "...", "..."], "1");  
console.log(player1); var player2 =  
showScore(["...", "...", "..."], "2");  
console.log(player2); Also, with an object  
literal you can't put functions inside. You  
can only return values from functions.
