Field of the Invention The present invention relates to a method and apparatus for producing a cold display panel using a display panel as a display substrate, and more particularly to a method and apparatus for producing a cold display panel using a display panel in which a thin-film transistor (hereinafter referred to as TFT) array, a color filter and a common electrode are formed on a substrate made of glass or a polymer film. 2. Description of the Related Art A display panel having a liquid crystal material sealed between a TFT array substrate having a matrix of TFTs and a color filter substrate having a color filter and a common electrode on a substrate has been proposed. In this kind of display panel, by applying a voltage to the common electrode, an electric field is generated between the common electrode and the TFT array substrate, and liquid crystal molecules in a liquid crystal layer placed between the TFT array substrate and the color filter substrate are aligned in accordance with this electric field, so that it is possible to perform display of a desired image by controlling transmission and blocking of light through the liquid crystal layer. This display panel is manufactured as follows: A predetermined pattern is formed on the TFT array substrate, then the TFT array substrate and the color filter substrate are joined to each other through a sealing material having a liquid crystal material sealed therebetween, and the liquid crystal material is injected into a space between the substrates. In this process, a display panel having a region in which the liquid crystal material is injected is referred to as a liquid crystal display panel. After the liquid crystal display panel is obtained, a display panel is formed by cutting the display panel into a number of divided panels. As the conventional liquid crystal display panel has a1d647c40b

The company had blamed "illegal acts" for the loss of its entire product development team. "In these illegal acts, Bayut illegally bought products that are not licensed or are based on stolen technology," the firm said. The company added that it did not know the perpetrator or amount of money paid for the stolen goods. "We do not know who is behind this act, but the development team was in the wrong place at the wrong time," Bayut said. The firm is a joint venture between two Thai firms, Bayut Information Technology and Teo Technology. Thailand is known as a centre for the manufacturing of integrated circuits (IC) - technology needed for key electronic components such as computers, TVs and mobile phones. The firm said on Sunday it had lost nearly 400 staff, but could not explain why. 'Factories burnt' "After we had not seen our development team for a few days, we could not reach them on their cell phones or Facebook," the firm said in a statement. "At that time we suspected that the development team had been kidnapped or kidnapped together with our company's office." Earlier this week, Bayut said it suspected it was the victim of an illegal "export order" and had lost about 90% of its staff. "This situation is not new to Bayut, and it has happened before

Keep your markup organized and readable. Tap on a section of a line to bring up a contextual context menu and use a new panel to show annotations, dimension references, parametric value, or other settings. (video: 1:45 min.) Keep your markup from falling into disarray with new Markup Assist, an automated way to help you organize your text-based annotations. When you start to type, Markup Assist automatically places and aligns common text items and uses the current drawing information to identify relationships, such as the current line's centerline, segment or other location. In addition to alignment, the feature helps create and maintain a common visual theme. (video: 1:25 min.) Drawing and Autocad Basics: Create a new, empty drawing in AutoCAD.
