Community ecology of *Sphaeramia nuclearis* (Annelida, Sphaeridiidae) from a wave-sheltered boulder coast on the eastern Gulf of Aqaba, Red Sea, Jordan. A taxonomic revision of *Sphaeramia nuclearis* was conducted in the coastal waters of the eastern Gulf of Aqaba, Jordan. The species is endemic to the Red Sea, and its distribution is restricted to the inner coastal areas where wave-sheltered boulders are abundant. The polychaetous annelid was observed to occur in depths of 4-100 m a1d647c40b

USAID: Programming language, not APIs, key to implementing e-government Relevant offers State and local agencies are eager to take advantage of cloud computing, but not all agencies are ready to do it the easy way. The U.S. Agency for International Development is encouraging the use of public-private partnerships to create software that can be shared, but that does not require agency-specific programming skills. "We want to build those bridges so that the agencies can actually use the cloud in the way it's intended, which is using it for shared applications," said Mark Little, acting deputy assistant administrator for civil affairs and foreign assistance. The agency has just launched a two-year, \$4.5 million effort that focuses on four cloud-related efforts:

- Cloud-based repositories. USAID will give grants to state and local agencies to build cloud-based data management systems. These will help state and local agencies manage mission-critical data through cloud computing. The program will also fund related software tools, such as Web-based data visualization and mapping tools.
- Cloud computing-based information systems. USAID will also give agencies the ability to create and share cloud-based information systems.
- Cloud-based I.T. infrastructure. USAID will give grants to organizations that have cloud-based I.T. infrastructure to help their agencies bring e-government applications and data to the cloud.
- Cloud computing testing. USAID will give \$1.7 million to help state and local agencies to test cloud computing applications and use them to improve services.

From the start of the project, USAID emphasized the role of public-private partnerships. "We want to make sure that these are designed in the way they're intended. We don't want the public sector to come to a cloud service and say, 'Where's my data?' and then have to build the infrastructure to serve it," Little said. The agency expects to select about 20 organizations to receive the federal grants by July. They will be asked to propose detailed plans for the use of cloud computing, and then to demonstrate how they can actually implement cloud-based systems. Once the projects are underway, the agency will track their progress and evaluate whether they are successful. The public-private partnerships will be awarded based on a point system, with the highest points awarded to the most promising efforts. "We will be using the money to
