I have following 3 tables; I want to find the address of the products sold in a specific country. For that I have to fetch the city of the products sold. Here is the table structure. What I am doing is, fetching the address of the products from the Address Table, and by matching that address with the address field in the city table, I can find the city. But the problem is I don't have address column in the city table, so I have to fetch the address from the address table and compare with the address of the products. But that will also give me multiple records. So I need to only fetch the address of the products sold in a specific country (city). The country is specified by Country_Id in country table. I have tried following query: select a.* from Address a join (select Address_Id, Country_Id from city where city.Country_Id=3) b on b.Address_Id = a.Address_Id where a.Country_Id=3; But that query is giving me multiple records. A: You don't need to join to the city table. You can just join to the country table and use a where condition: select a.Address_Id, b.City_Id from Address a join Country b on a.Country_Id = b.Country_Id where a.Country_Id = 3 a1d647c40b

Better Client-side Session Management With Stash (PHP) - nochum ===== davidw I use Stash in some projects, and like it a lot. I think using it in a complicated web app where you have more than one application server, or where you need to worry about putting the session data out to some sort of storage backend is still a bit overkill though. If you only have one application server and you can stuff sessions into memcache or redis, you might as well. --- joe_the_user As someone else said, anything beyond a small site and small number of servers is probably overkill. Just because you can is no reason to do it. ----- sebastianhoitz I'm very thankful for the Stash libraries they helped me a lot, however I don't like to have to setup my own db. It would be great if there was a way to get the active session data into a memcache or something. . and that would be totally fucked up if it were made clear that it isn't. I'd have to read all of those fics and probably do the same thing you did and just turn a blind eye on it. It's really hard to get people to accept that people they know really don't want to see them that way. But yeah, I do hate to be that person, but I do hate to see someone like that stay in a job they're not happy with. He's talking about fans of JK, lol. But in a way I can see where he is coming from. I guess the thing is, a lot of people do have those moments where they'meer' someone and it's a really big turn on, and I can see how that could really ruin a friendship, especially if the ones who'meer' them are good friends and/or related in some way. How about the song "Get Back" (Ozzy Osbourne)? I'm assuming a lot of people don't even realize what it is and/or remember the original version. Does the cover annoy anyone? Well, I think that covers the main points. To be honest, I think this has gone pretty

What's New In AutoCAD?

AutoCAD 2020 supports exporting to HTML 5, which makes it easy to share your drawings online. Integrated Feedback: AutoCAD's Integrated Feedback is a new workspace where users can capture and incorporate feedback on their drawings, without opening any additional documents. You can apply feedback to entire drawing files, sections, shapes, layers, regions, constraints, and text. Users can use their own image data, and input text directly from the document to add notes to your drawing. Video with instructions: Drawings can be categorized into categories, which are supported by contextual ribbon menus that appear automatically when you select the category. Drawings can be categorized into categories, which are supported by contextual ribbon menus that appear automatically when you select the category. Categories can include properties such as site or site drawing. New AutoCAD Project Format: Support for a new AutoCAD 2019 project format, which is easy to use and maintain. New project format includes automatic updating of all data, reduced file size, and less data to transfer. The format also supports file conversion from multiple file formats. Projects can also be set to automatically update or refresh when there are changes to the project file. New Functions: Simplify Line and Arc Center Easily center a line or arc when you change the end point. Vector-based line and arc tool improvements: Drawing tools that incorporate a vector solution, including line and arc, with their own properties for thickness, color, shape, and end point. Use the speed selector to choose a tool. "Select" automatically has the same properties as the selected tool. Direction Text Text with arrows, arrows with text, text with arrows, text with arrows with text, text with arrows with text, arrows with text, arrows with text with text, and text with arrows with text. You can change direction of the text or arrows at any point. The text or arrows are always automatically anti-aliased for a clean look. Simplify Line Intersection Drag and drop two line segments to create a line intersection point, which enables you to change the angle between the lines at the intersection. Draw Line with Line Tools You can draw a line with your normal Line tool
