Space Command got a little heated on Twitter with a retired Air Force general. In a since-deleted tweet, Gen. John Hyten made fun of a fake “Darth Vader” tweet made by some Twitter trolls. Hyten’s tweet was in response to a non-existent tweet by “Darth Vader,” someone who goes by the name “Darth Hater” online. Darth Vader @DarthHater – let’s agree to disagree on this: What if we sent you to the moon, but instead of a lightsaber, you brought a bag of hammers? — John R. Category:CATIAQ: Is "I'm all for" an  
idiomatic expression for one's full  
support? Is "I'm all for" an idiomatic  
expression for one's full support? For  
example: I'm all for your visiting a  
psychologist. I'm not certain about the  
meaning of "I'm all for" and "all for"  
but I see that the former is mentioned  
in the answer to the question and I still  
don't see how it could be used as

---

support for something. A: In this context, the expression 'I'm all for' is fine. From M-W: all for – full, unqualified support, approval Both Ngrams and Youtube videos suggest that it is well used in various contexts.

The syntax might be a little tricky though. The most common form is I'm all for X, where X is an action or an object. I'm all for (building) the new house, but I'm not all for (biking to school) every day. Here are some examples: I'm all for her giving you that promotion. He was all for me wanting to do this charity thing. I'm all for the idea of teaching your children

---

to be bilingual. Or, it might not be the best choice of words. I'm all for the idea of teaching your children to be bilingual. If you want to be sure, use Google's Ngram Viewer. A: I'm all for means "fully support" I support him going to the movies. I'm all for him traveling to Mexico. The key word is "support" Q: How to pass data from jQuery UI dialog to code behind How do I pass the value from the jQuery dialog back to the code behind? I have the code behind that will be called when the user clicks on "Add New"

obstructive pulmonary disease (COPD) is a major cause of morbidity and mortality worldwide. Its clinical course is characterized by progressive airflow limitation and recurrent acute exacerbations resulting in increased healthcare costs. The annual exacerbation rate is very high and risk of death has increased during recent years. About 40% of patients with COPD and the majority of patients with chronic bronchitis experience recurrent exacerbations, often precipitated by a viral infection. Therapies that target exacerbations may improve the long-term outcome

of COPD. High-dose prednisone is the standard treatment for exacerbations. Despite its high efficacy, there are clinical and economic burdens associated with its use. As a result, the European Medicines Agency has recommended high-dose prednisone be used in COPD
