### What's New in the?

EDmini updater is a program that is able to scan your device, check its software version and download, if required, the latest updates of your device drivers. All you need is to plug the USB cable of your Ethernet Disk mini to the computer. EDmini updater will check if there are any updates available for the device drivers. If that is the case, the software will download, install and configure the latest versions of the drivers for your Ethernet Disk mini. EDmini updater can also help in fixing common errors of your Ethernet Disk mini device, for example it can repair connection problems, repair USB errors, fix Windows file access problems, etc. Key features: Easy-to-use: with a single-click you will be able to check and install the latest driver updates of your Ethernet Disk mini device, any time you want. Compatible with almost all Ethernet Disk mini devices: EDmini updater will scan your Ethernet Disk mini and try to find the latest driver updates for it, then it will download and install the latest driver versions, automatically. Re-sync the Network Card Device: EDmini updater will re-sync your Ethernet Disk mini device after the installation of the new driver versions. EDmini updater is an easy-to-use Ethernet Disk mini driver updater, so you don't need to have any technical skills to use it. It will scan and install your Ethernet Disk mini driver updates automatically. All you need is to plug the USB cable of your Ethernet Disk mini to the computer. To run the EDmini updater, simply double-click on the .exe file to install the Ethernet Disk mini updater on your computer. Important: EDmini updater is a fully functional software, it does not contain any adware or any other type of software that may harm your computer. The software has a clean and reliable installer, and does not include any spyware or any other type of adware. It is only a useful software. What's new in this version: Fixed a crash issue when installing some versions of some Ethernet Disk mini devices. in which only the right half of the lever is used, thus reducing the required space. The path of movement of the moving part remains unchanged. In a further preferred variant of the invention, the operating element is embodied as a transverse arm of a transverse lever, which is mounted pivotably about a horizontal axis in a housing. The angle of movement of the arm is thus larger than the angular displacement of the lever during a pushing movement. The angular movement of the lever is determined by the displacement path of the arm and thus by the displacement path of the operating element. A relatively simple embodiment of the lever mechanism is obtained. In a further preferred variant of the invention, the lever mechanism is mounted fixedly on the side wall of a room with a partition wall, in such a
