However, if we believe that the use of methamphetamines has little or no impact on these things, then we will have to reassess what we believe about the way things work and perhaps start to question the way in which we conduct our education and professional lives. If we believe that methamphetamines do not affect these things, then we should not be surprised to see people in both the professional and education sectors who struggle with substance misuse themselves. When this happens, the implications are far reaching. The use of methamphetamines is not the only issue to think about when people in these fields use or misuse substances. Research in this area clearly shows that there are many other issues to consider when a student or teacher uses substances (Fadiman, [CR10]; Oh et al., [CR21]; Watson, [CR31]). Other issues should be taken into consideration when thinking about why a student or teacher has a substance misuse problem. The importance of understanding the context of these problems is emphasised here by discussing the implications of these problems in terms of workforce capacity and implications for the way in which education and professional lives are conducted. Implications for Workforce Capacity {#Sec6} ----- The assumption in much of the research on substance misuse is that a substance misuse problem leads to a reduced workforce capacity. The evidence for this assumption is clear and it is true in some contexts. The studies that show this suggest that the cost of employment for someone with a substance misuse problem is higher than for someone without a substance misuse problem. However, it is also clear that there are many other factors that impact on people's capacity to work, both in terms of the type of work that is available and the ability to cope with the type of work that is available. For example, the level of education of the employee can be a major factor when deciding what kind of job they can take on and whether they will be successful in that job (Woods, [CR32]). There are many other considerations to think about when we consider why someone has a substance misuse problem. The point here is that people can have a substance
