EZLaunch was written by Ziyad Al-hajji, who is a newbie with C#, a.NET developer. A set of Windows utility packages for Windows XP. These packages are simple, easy to install, and use a simple XML format for configuration. They include a collection of controls for basic configuration of some features of Microsoft Windows XP, and also a collection of controls for the advanced configuration of those features. It is structured in groups that are logically related and to support each other. The groups are called, in order, Modules, Scheduled Tasks, Logging, Window Managers, Graphics, System, and Advanced System Settings. A module is either a control or a group of controls. A control is a Windows form component that can be used for specific functions in the control group. Each control is listed on the Table of Contents page for the group it belongs to. The Windows Control Library is the control library shipped with Windows XP. It has many, many controls and many, many pages. The scheduling control does not use the windows control library. Each control has a page where you can configure the control for basic use and/or advanced settings. The pages include dialog boxes for setting the basic settings, property pages for setting advanced settings, and properties for storing the settings to the XML file. Each XML file uses the formatter so that you can view it in any XML editor. You can find the XML files in the Modules folder. The Files section provides links to these utility packages if you want to learn more about
