C++ libraries AutoCAD is based on C++ programming language with a number of C++ libraries available for AutoCAD. A large number of C++ library are used by third party developers to develop products and applications for AutoCAD. AutoCAD uses internal C++ libraries for drawing and command processing. The official documentation available in the Autodesk Web site describes the type of operations supported by these C++ libraries. The names of all C++ libraries are based on the keyword "ddk": ddk – Data Definition Language. CAPI (C Application Programming Interface) Functionality such as drawing, command processing, property management, path management, etc., which are not specific to AutoCAD, are provided via a C API (C Application Programming Interface). In other words, this interface is used to connect the AutoCAD environment and third-party applications. Examples of third-party applications that use this API are FoxIt.CAD, Adobe Indesign, and Intergraph. This API uses a particular interface to communicate to AutoCAD, and functions are stored in C header files that are linked with the C++ library, and can be implemented by the third-party applications in any programming language. The original C API was replaced by C++ library for AutoCAD 2007 and AutoCAD 2009. The C++ library supports the same functionality as the C API, and is used by Autodesk for developing add-on applications and products for AutoCAD. Other companies and organizations also use the C++ library as the basis for developing their applications for AutoCAD. VBA and VBScript VBA (Visual Basic for Applications) is a language used to develop applications for Microsoft Office. It has similar properties to Pascal, Basic, C++ and other related programming languages. AutoCAD has a number of VBA libraries available, which are used for applications and automation. These libraries are called by VBA applications and the command processing is done in AutoCAD. VBScript is another language used for scripting to automate tasks in Microsoft Office. VBScript is similar to JavaScript, a scripting language that is used for web page scripting and is common in web browsers. AutoCAD has a large number of VBScript libraries for automation. The following libraries are used by developers to automate tasks using AutoCAD, and most of these libraries are written in VBScript: Applications AutoCAD Architecture ca3bfb1094
